	 To compare how things move on different 	 To identify that animals, including 	 (in)vertebrates To explore the part that flowers play in the 	opaque translucent surface porous • To compare and group together different	 To recognise that they need light in
Key knowledge ALL children should at least know Please refer to the progression of skills and knowledge map for more detail.	 surfaces. To describe magnets as having 2 poles, predict whether 2 magnets will attract or repel each other, depending on which poles are facing. To notice that some forces need contact between 2 objects, but magnetic forces can act at a distance. 	 To identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat. To identify that humans and some other animals have skeletons and muscles for support, protection and movement. 	 To explore the part that nowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal. To identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers To explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant. To investigate the way in which water is transported within plants. 	 It compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. To describe in simple terms how fossils are formed when things that have lived are trapped within rock. To recognise that soils are made from rocks and organic matter. 	 To recognise that they need light in order to see things and that dark is the absence of light. To notice that light is reflected from surfaces. To recognise that light from the sun can be dangerous and that there are ways to protect their eyes. To recognise that shadows are formed when the light from a light source is blocked by an opaque object. To find patterns in the way that the size of shadows change.
